Title:

Cooled gas discharge lamp with light filter - using coloured glass particles in lamp jacket for spectrum correction

Patent Assignee:

DOINIKOV A S

DOIN/

Abstract:

Abstract (Basic): SU 539344A

Gas discharge lamp with liquid cooling system for selective illumination spectrum is used for plant growth research and sunlight imitation. The lamp contains gas discharge element inside coaxial tubes forming inner channel for circulation of coolant and outer channel for light filter.

The light filtering layer consists of granulated colour glass particles, composition of which provides selected spectrum.

The filter is connected to coolant circulation system by mesh diaphragms.
